

Kristian Egebjerg

Kristian is an MD-PhD fellow at the Department of Oncology at Rigshospitalet. The PhD focuses on HER2 and investigates HER2-targeted treatment in a novel patient cohort of esophageal squamous cell carcinoma in a national Phase II trial, as well as in patients with HER2-mutated solid tumors receiving HER2-targeted treatment at the Phase I Unit at Rigshospitalet. Additionally, the PhD explores new methods and approaches for reliably detecting HER2-positive patients across various solid tumor types, including HER2-low breast cancer patients. Kristian has also co-created and co-manages a research group in upper GI cancers with Morten Mau-Sørensen.
